                                                                                                                                                                                                                           Center: Whitehead Institute/ MIT Center for Genome Research
                                                                  Submitted (19-MAR-2000) Whitehead Institute/MIT Center for Research, 320 Charles Street, Cambridge, MA 02141, USA On Jun 1, 2000 this sequence version replaced gi:7264212. All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTE: This is a 'working draft' sequence. It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 20 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Center code: WIBR

Genes with similarity to proteins in the databases are described in
'product' or 'note' qualifiers. Genes that have no significant
protein similarity are described as 'unknown protein'.
The software programs used to predict genes include: Grail
(Informatics Group, Oak Ridge National Laboratory,
http://compbio.ornl.gov/Grail-1.3/),
GENSCAN (Chris Burge, MIT, http://CR-081.mit.edu/GENSCAN.html),
NetGene2 (S.M. Hebsgaard, et al., CBS, Technical University of
SplicePredictor (Volker Brendel, Stanford University,
http://gremlinl.zool.iastate.edu/cgi.bin/sp.cgi).
Genes encoding tRNAs are predicted by tRNAscan-SE

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOTE: This is a 'working draft' sequence. It currently consists of 17 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    reads

Sequence 19, Application US/08889841B
Patent No. 6091392
GENERAL INFORMATION:
APPLICANT: Berman, Phillip W.
TILLE OF INVENTION: HIV ENVELOPE POLYPEPTIDES AND VACCINE
FILE REFERENCE: 14918-703CIP
CURRENT APPLICATION NUMBER: US/08/889,841B
CURRENT FILING DATE: 1997-07-08
EARLIER APPLICATION NUMBER: US 60/676,737
EARLIER PILLING DATE: 1996-07-08
NUMBER OF SEQ ID NOS: 57
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 19
LENGTH: 494
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     15.2%; Score 60; DB 3; Length 494; 29.9%; Pred.                                                     This invention describes a novel beacon protein and its encoding nucleic acid which is expressed in larger amounts in hypothalamus tissue of obese animals compared to lean animals. Agonists and antagonists of beacon can be used to treat obesity, amorexia, weight maintenance, energy imbalance, diabetes, metabolic syndrome, dyslipidemia, hypertension and/or insulin resistance. The beacon protein, itself is used to manufacture medicaments for treatment of obesity, anorexia, energy imbalance or diabetes. The treatment is contemplated for both human and animals, such as those important to the livestock industry. The antibody and polynucleotides are useful in diagnosis of conditions as above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ligand of beacon protein useful for treating obesity, anorexia, energy imbalance, diabetes, metabolic syndrome, dyslipidemia, hypertension and

```
This invention describes a novel beacon protein and its encoding nucleic acid which is expressed in larger amounts in hypothalamus tissue of obese animals compared to lean animals. Agonists and antagonists of beacon can be used to treat obesity, anorexia, weight maintenance, energy imbalance, diabetes, metabolic syndrome, dyslipidemia, hypertension and/or insulin resistance. The beacon protein, itself is used to manufacture medicaments for treatment of obesity, anorexia, energy imbalance or diabetes. The trreatment is contemplated for both human and animals, such as those important to the livestock industry. The antibody and polynucleotides are useful in diagnosis of conditions as above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
                                                                                                                                                                                                                                                                                                                                                                                                             Ligand of beacon protein useful for treating obesity, anorexia, energy imbalance, diabetes, metabolic syndrome, dyslipidemia, hypertension and insulin resistance -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention is related to the isolation of a ligand known as beacon from the Israeli sand rat. Beacon is associated with the regulation of energy balance, and the protein, its coding sequence and analogues can be used in the treatment of diabetes, obesity, anorexia, energy imbalance, metabolic syndrome, dyslipidaemia, hypertension and insulin resistance. In addition, they can be used in agriculture to produce leaner animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cardiant; thrombolytic; coaquiant; variant through a minarity thrombolytic; coaquiant; variant thrombolytic; coaquiant; variant thrombolytic; coaquiant; variantidabetic; hypotensive; dermatological; immunosuppressive; antiinflammatory; antibacterial; antiinflammatory; antibacterial; antiinflammatory; antibacterial; antiinflammatory; antibacterial; the sequences can be used for determining the presence of or predisposition of to, or preventing or treating pathological conditions associated with an orky-associated disorder. The nucleic acids can be used to express ORRY proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobiuntia, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antiparkinsonian; nootropic; neuroprofective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant;

cardiant; thrombolytic; coagulant; wasotropic; antidabetic; osteopathne; cardiant; thrombolytic; coagulant; vasotropic; antidabetic; hypotensive; cardiant; thrombolytic; coagulant; vasotropic; antidabetic; hypotensive; dermatological; immunosuppressaive; antiinflammatory; antibacterial; cardiant; thrombolytic; coagulant; vasotropic; antidabetic; hypotensive; cardiantiformatic; antithyroid; and antidacenic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an Correct of proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders cardiovascular disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune cardialsed admage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic;
severe combined immunodeficiency; malaria; autoimmune disorder; asthma; allergy; aplastic anaemia; nocturnal haemoglobinuria; burn; wound; bone damage; cartilage damage; antiinflammatory disease; coagulation;

Submitted (APR-1999) to the EMBL/GenBank/DDB databases.
--- TISSUE SPECIFICITY: HIGHLY EXPRESSED IN ROSETTE LEAVES. ALSO
EXPRESSED IN ROOTS, LEAVES, FLOWERS, AND SILIQUES.
--- SIMILARITY: BELONGS TO THE CYTOCHROME P450 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    STRAIN-CV. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FOLLOWED BY HAIRPIN FORMATION (TRANSESTERIFICATION). RAGI/2 HAS ALSO BEEN SHOWN TO FUNCTION AS A TRANSPOSASE IN VITRO, AND TO POSSESS RSS-INDEPENDENT ENDONUCLESES ACTIVITY (END PROCESSING) AND HAIRPIN OPENING, RACI ALONE CAN BIND TO RSS BUT STABLE, EFFICIENT BINDING REQUIRES RAG2. ALL KNOWN CATALYTIC ACTIVITIES REQUIRE THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (V), DIVERSITY (D), AND JOINING (J) GRNE SEGMENTS. THIS COMBINATION, ALLOWS THE GENERATION OF AN ENORMOR AS V(D)J RECOMBINATION, ALLOWS THE GENERATION OF AN ENORMOS RANGE OF BINDING SPECIFICITIES FROM A LIMITED AMOUNT OF GENETIC INFORMATION. THE RAGI/RAGZ COMPLEX INITIATES THIS PROCESS BY BINDING TO THE CONSERVED RECOMBINATION SIGNAL SEQUENCES (RSS) AND INTRODUCING A DOUBLE-STRAND BREAK BETWERN THE RSS AND THE ADJACENT CODING SECHENT. THESE BREAKS ARE GENERATED IN TWO STEPS, NICKING OF ONE STRAND (HYDROLYSIS),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   109 VMSVVCKN--NKKVTFRCTERDLVGDVPEARYGHSLDVVYSRGKSMGVLFGGRSYMPSNQ 166

                                                                                                                         This invention describes a novel beacon protein and its encoding nucleic acid which is expressed in larger amounts in hypothalamus tissue of obese animals compared to lean animals. Agonists and antagonists of beacon can be used to treat obesity, anorexia, weight maintenance, energy imbalance, diabetes, metabolic syndrome, dyslipidemia, hypertension and/or insulin resistance. The beacon protein, itself is used to manufacture medicaments for treatment of obesity, anorexia, energy imbalance or diabetes. The treatment is contemplated for both human and animals, such as those important to the livestock industry. The antibody and polynucleotides are useful in diagnosis of conditions as above.
                                                                                                                                                                                                                                                                                                                                                                                                               aaagaaaagtccgcgttaagtgcaacaccgatgacaccatcggggacttgaagaaactgat 120

Ligand of beacon protein useful for treating obesity, anorexia, energy imbalance, diabetes, metabolic syndrome, dyslipidemia, hypertension and insulin resistance -
                                                                                                                                                        The present invention is related to the isolation of a ligand known as beacon from the Israeli sand rat. Beacon is associated with the regulation of energy balance, and the protein, its coding sequence and analogues can be used in the treatment of diabetes, obesity, anorexia, energy imbalance, metabolic syndrome, dyslipidaemia, hypertension and insulin resistance. In addition, they can be used in agriculture to
                                                                                                                                                                                                                                                                                                                                                                           180
                                                                                                                                                                                                                                                                                                                                                                                            180

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs demonstrated from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping; ss.

The present sequence is one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. ESTS sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dr primed cDNA libraries. Such ESTS are not well suited for isolating cDNA sequences con a sequences have been obtained, the full 5' UTR is rarely included. 5' ESTS are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTS are also used they are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequence tag; secreted protein; cDNA isolation; mapping; ss.

The present sequence is one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   195

```

A single-stranded DNA (or its complementary strand or the corresp. double-stranded DNA) which comprises one of the 7837 "GS" sequences given in T19001-T26837 and which is able to hybridise to part of human genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature) sequences were obtained from 3'-directed cDNA libraries prepared of from various human tissues; synthesis of cDNA was initiated from the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-endented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a cDNA library can be determined (sept. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for recognising different cell types.

Sequence 333 BP; 91 A; 73 C; 76 G; 80 T; 13 other;

double-stranded DNA (or its complementary strand or the corresp. double-stranded DNA) which comprises one of the 7837 "GS" sequences given in T19001-T26837 and which is able to hybridise to part of human genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature) sequences were obtained from 3'-directed cDNA libraries prepared from various human tissues; synthesis of cDNA was initiated from the from various human tissues; synthesis of cDNA was initiated from the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-untranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a cDNA library can be determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          tgacaccatcggggacttgaagaaactgatagcggcccaaactggcactcgttggaataa 150

Sequences A31040-A32093 represent novel plant microsatellite sequences and associated flanking species. The sequences comprise a central core repeat sequence, especially selected from the sequences A32094-A32096 with left and right flanking sequences. The polynucleotide sequences can be used in the detection of DNA polymorphisms, in genome mapping, in physical mapping, in positional cloning of genes, in variety identification and in evaluation of genetic variability within and

Agonists and antagonists of beacon can be used to treat obesity, anorexia, weight maintenance, energy imbalance,

between plant tissues, populations, cultivars, species and species groups. They may also be used to design hybridization probes for oligonucleotide fingerprinting and library screening and to design primers for microsatellite-primed PCR. Microsatellite markers are useful to locate specific economically useful genes in plant genomes.

diabetes, metabolic syndrome, dyslipidemia, hypertension and/or insulin resistance. The beacon protein, itself is used to manufacture medicaments for treatment of obesity, anorexia, energy imbalance or diabetes. The treatment is contemplated for both human and animals, such as those important to the livestock industry. The antibody and polynucleotides are useful in diagnosis of conditions as above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ligand of beacon protein useful for treating obesity, anorexia, energy imbalance, diabbetes, metabolic syndrome, dyslipidemia, hypertension and insulin resistance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Note: This sequence is stated in the claims as being a protein sequence,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention is related to the isolation of a ligand known as beacon from the Israeli sand rat. Beacon is associated with the regulation of energy balance, and the protein, its coding sequence and analogues can be used in the treatment of diabetes, obesity, anorexia, energy imbalance, metabolic syndrome, dyslipidaemia, hypertension and insulin resistance. In addition, they can be used in agriculture to produce leaner animals.

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs and qenomic DNAs. 5' ESTs are also used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                                                                                                                                                                                                                                                                  ESTs are also used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
